

POOL SENSE

9V Connected Floating Pool Analyzer

POOL SENSE is a floating water analyzer which can be installed in a few minutes directly in your pool. It makes it easy to analyze the quality of the pool water. It monitors the main water parameters (pH, disinfectant, temperature). It also warns and advises you as necessary. It is accessed and configured locally via Bluetooth during installation. Once connected to one of our gateway (e.g LR-MB-10), you can access and monitor the data wherever you are.
